

65-68 Mustang

POLISHED STAINLESS STEEL CONVERTIBLE TOP MOLDINGS

Original production workers installed these parts by hand and used in-house alignment techniques during the final stages of assembly. This resulted in fitment and hole placements that varied on each vehicle. ACP developed our moldings using original parts and multiple original bodies to provide the most accurate fitment possible.

Constructed from thin gauge stainless steel that follows the shape of the windshield frame. This premium material allows for the proper amount of flex (both during and after installation) that is uniquely needed on the convertible chassis.

IMPORTANT: PLEASE READ BEFORE INSTALLATION

No two Mustangs are exactly alike. Not intended for aftermarket bodies but will also work. Slight modification may be required to perfectly conform to your specific Mustang's windshield frame to accommodate for decades of the metal shifting, twisting, and moving. Drilling may be required if mounting studs do not line up with hole placement that is not true to original spec.
